ROBOTICS

Software Lead

I lead autonomous software development for a competition robot, translating match strategy into repeatable motion on a real field.

- ↳ Build and tune autonomous routes around scoring positions, obstacles, timing, and robot orientation.
- ↳ Use localization, pose, heading, path state, and timing telemetry to diagnose problems instead of guessing.
- ↳ Iterate through testing and field debugging until robot behavior is reliable across repeated runs.

PEDRO PATHING · OPEN SOURCE

12 MERGED PRS

Contributor + Beta Tester

Contribute to the Quickstart and documentation used by FTC teams to configure localization, tune motion, and build autonomous routines.

- ↳ Shipped four Quickstart changes involving two-wheel and three-wheel tuners, auto-tuning, and hardware configuration.
- ↳ Delivered eight documentation improvements covering localization, coordinates, Bézier curves, constraints, and setup clarity.
- ↳ Fixed practical setup friction so advanced autonomy tools are easier for other student teams to understand and use.

Selected Projects

HARDWARE · FIRMWARE Streaming Hackpad A compact macro controller for streaming and media workflows.	PCB · ELECTRONICS Custom Dev Board Board-level prototyping, electronics planning, and system iteration.
HARDWARE · INPUT Wireless Split Keyboard An exploration of ergonomic layout and wireless interaction.	WEB · FRONTEND Pulse A clean product interface designed for fast-moving teams.
